

# CSS

---

[w3schools](#) provides a great CSS tutorial if you've never seen CSS before!

## Questions

1. What does **CSS** stand for?
2. Describe the *syntax* for writing CSS.
3. What is a **class**? How is it different from an **ID**?
4. What is a CSS **selector**?
5. Explain the difference between these units: **px**, **em**, **vw**, **%**, **rem**

## Practice

For each scenario, write the CSS that would meet the specification.

1. Paragraphs have no padding but vertical margins of **1.5vh**
2. Links with class **--inline** are not underlined until they are hovered over
3. The first child of **ol** and **ul** have a background color of light grey
4. Any element with class **Button** will change the cursor to a **pointer** when moused over
5. Any element with class **Modal** is positioned directly at the center of the page and will not move when the page is scrolled
