

Project Presentation

You should be ready to give a presentation (as detailed below) to the rest of the class during **the week of January 10th, 2022**.

Before the Presentation

The night before your presentation, you should distribute executable files to everyone in the class. Make sure your code runs on both Windows and Mac!

Feel free to email me if there's anything you want to set up before class.

Presentation Structure

Your presentation should be **20 minutes**. You do not have to stick to the example timeline given below, but you should cover the same topics!

Time	Description
2 minutes	Introduce the project
6 minutes	Overview of project features
6 minutes	Highlights of project code
3 minutes	Bugs and possible extensions
3 minutes	Questions from audience

Your presentation will be cut off at **22 minutes** so that each group has enough time to present.
